Abstract: The present work provides an account of flowering plants of the Ghughua Fossil Park, Madhya Pradesh, India as observed during two exploration tour. A total number of 452 species under 300 genera belonging to 80 families are recorded. Out of these 97 species in 62 genera and 13 families belong to monocot and 355 species in 238 genera and 67 families belong to dicot. Further analysis of data indicated that 244 species are occasional, 159 species are common, 27 species are rare, 19 species are frequent and 3 species are planted in the park.

Keywords: Angiosperms; Contributions; Ghughua Fossil Park; Madhya Pradesh

1. Introduction

Ghughua Fossil Park is a National Park, situated in Mandla district of Madhya Pradesh in India. This national park has plants in fossil form that existed in India anywhere between 40 million and 150 million years ago spread over seven villages of Mandla District (Ghuguwa, Umria, Deorakhurd, Barbaspur, Chanti-hills, Chargaon and Deori Kohani). The Ghughua Fossil Park is an area that spreads over 274,100 km². The site was founded during the 1970 by Dr. Dharmendra Prasad, a statistical officer of the Mandla district and honorary secretary of the district archaeology unit. It was declared a National Park in 1983 by government of Madhya Pradesh. Numerous woody plants, climbers, leaf, flowers, fruit, seed, and shell fossils have been found here, some of which dates as far back as 65 million years, the most prominent of which are the palm fossils. A eucalyptus fossil found at Ghughua Fossil Park is the oldest fossil of its type ever discovered and this find supports its origins from Gondwana. Additional notable discoveries include a dinosaur egg fossil. Other fossilized plants include ancient forms of date palm, neem, jamun, banana, rudraksh, jackfruit and aonla. About 65 Milion (6.5 crore) years ago, this area was covered by forests similar to the evergreen and semi evergreen forests of today's Western Ghats and northeast India. The forests were made up of moisture-loving plants. There was a three-tier forest structure consisting of low trees or shrubs growing below moderate to large-sized trees. The middle level had mostly palm-like trees.

The vegetation of the park is tropical dry deciduous. They are interspersed with swamps. The *Acacia catechu*, *A. leucophloea*, *Anogeissus latifolia*, *Buchanania cochinchinensis*, *Butea monosperma*, *Cassia fistula*, *Diospyros melanoxylon*, *Flacourtie*

indica, *Haldina cordifolia*, *Lannea coromandelica*, *Lagerstroemia parviflora*, *Phyllanthus emblica*, *Madhuca longifolia* var. *latifolia*, *Mitragyna parviflora*, *Terminalia alata*, *Wrightia tinctoria*, etc., are the common trees in around the park. Some common shrubs and undershrubs like *Grewia flavescens*, *Helicteres isora*, *Nyctanthes arbor-tristis*, *Urena lobata*, *Waltheria indica* and *Ziziphus nummularia* are found in the park area. The undergrowth is sparse and mainly constituted by *Achyranthes aspera*, *Ageratum conyzoides*, *Alysicarpus vaginalis*, *Blepharis maderaspatensis*, *Corchorus aestuans*, *Desmodium gangeticum*, *Elephantopus scaber*, *Hybanthus enneaspermus*, *Indigofera tinctoria*, *Lagascia mollis*, *Lindernia crustacea*, *Melochia corchorifolia*, *Pentanema indicum*, *Dicliptera paniculata*, *Pupalia lappacea*, *Cyanthillium cinereum*, *Tephrosia purpurea*, *Zornia gibbosa*, etc. and a large varieties of sedges and grasses like *Apluda mutica*, *Cyperus* spp., *Dichanthium annulatum*, *Eragrostis* spp., *Fimbristylis* spp., *Heteropogon contortus*, *Iseilema laxum*, *Oplismenus burmannii*, etc. Climbers are quite common in the park and consist of *Abrus precatorius*, *Ampelocissus latifolia*, *Cajanus scarabaeoides*, *Cryptolepis dubia*, *Coccinia hirsutus*, *Ichnocarpus frutescens*, *Dioscorea bulbifera*, *Pergularia daemia*, *Ventilago dentata*, *Ziziphus oenoplia*, etc. *Dendrophthoe falcata* is the most common parasite in this park.

A review of literature indicates that Ghughua Fossil Park has received little attention of botanists. Botanical Survey of India has published Flora of Madhya Pradesh (Verma *et al.*, 1993; Mudgal *et al.*, 1997; Singh *et al.*, 2001; Khanna *et al.*, 2001) wherein the plants of Mandla district have also been included but no effort has been made to work out the floristic

account of fossil park in separately, while the vegetation of the park is very important for many more aspects. Thus, there is urgent need to study the floristic of the Ghughua Fossil Park separately in detail. It is also worth mentioning here that the Convention on Biological Diversity (CBD) and the Biological Diversity Bill 2002 of India have also laid emphasis on inventorisation of the rich biodiversity areas, so that a fair assessment can be made for sustainable utilization of bioresources. Keeping these

points in view, the present study has been undertaken to carry out the floristic diversity of Ghughua Fossil Park in order to help in formulating conservation strategies and measures for sustainable utilization of plant resources.

Enumeration

All the species have been enumerated in alphabetical order with the correct binomial, local name if any, family habit and status of plants (Table 1).

Table 1. Flowering plants of Ghughua Fossil Park, Madhya Pradesh, India

S. No.	Botanical Name / Local Name	Family	Habit	Status
1	<i>Abelmoschus ficulneus</i> (L.) Wight & Arn. ex Wight / Jangli Bhindi	Malvaceae	Shrub	O
2	<i>Abelmoschus manihot</i> (L.) Medik. subsp. <i>tetraphyllus</i> (Roxb. ex Hornem.) Borss. / Jangli Bhindi	Malvaceae	Shrub	O
3	<i>Abrus precatorius</i> L. / Ghughchi	Fabaceae	Climber	R
4	<i>Abutilon indicum</i> (L.) Sw. / Kanghi	Malvaceae	Shrub	O
5	<i>Acacia catechu</i> (L. f.) Willd. / Khaire	Mimosaceae	Tree	C
6	<i>Acacia farnesiana</i> (L.) Willd.	Mimosaceae	Trees	O
7	<i>Acacia leucophloea</i> (Roxb.) Willd. / Reujha	Mimosaceae	Tree	C
8	<i>Acacia nilotica</i> (L.) Willd. ex Delile subsp. <i>indica</i> (Benth.) Brenan / Babool	Mimosaceae	Tree	O
9	<i>Acacia torta</i> (Roxb.) Craib / Ail	Mimosaceae	Shrub	O
10	<i>Acalypha indica</i> L. / Kuppi	Euphorbiaceae	Herb	O
11	<i>Acanthospermum hispidum</i> DC.	Asteraceae	Herb	C
12	<i>Achyranthes aspera</i> L. / Chirchira	Amaranthaceae	Herb	C
13	<i>Acmella uliginosa</i> (Sw.) Cass. / Van-akarkara	Asteraceae	Herb	O
14	<i>Acrocephalus hispidus</i> (L.) Nicolson & Sivadasan	Lamiaceae	Herb	O
15	<i>Aegle marmelos</i> (L.) Correa / Bel	Rutaceae	Tree	O
16	<i>Aerva lanata</i> (L.) Juss. ex Schult.	Amaranthaceae	Herb	C
17	<i>Aerva sanguinolenta</i> (L.) Blume	Amaranthaceae	Herb	O
18	<i>Ageratum conyzoides</i> L.	Asteraceae	Herb	F
19	<i>Ageratum houstonianum</i> Mill.	Asteraceae	Herb	O
20	<i>Ailanthus excelsa</i> Roxb. / Arlu	Simaroubaceae	Tree	O
21	<i>Alangium salvifolium</i> (L. f.) Wang / Ankol	Cornaceae	Tree	C
22	<i>Albizia lebbeck</i> (L.) Benth / Kala Shirash	Mimosaceae	Tree	O
23	<i>Albizia odoratissima</i> (L. f.) Benth. / Chichva	Mimosaceae	Tree	C
24	<i>Albizia procera</i> (Roxb.) Benth.	Mimosaceae	Tree	O
25	<i>Alternanthera philoxeroides</i> (Mart.) Griseb.	Amaranthaceae	Herb	O
26	<i>Alternanthera pungens</i> Kunth	Amaranthaceae	Herb	O
27	<i>Alternanthera sessilis</i> (L.) R. Br. ex DC. / Gudsakari	Amaranthaceae	Herb	F
28	<i>Alysicarpus homosus</i> Edgew.	Fabaceae	Herb	C
29	<i>Alysicarpus monilifer</i> (L.) DC.	Fabaceae	Herb	F
30	<i>Alysicarpus rugosus</i> (Willd.) DC.	Fabaceae	Herb	O
31	<i>Alysicarpus vaginalis</i> (L.) DC.	Fabaceae	Herb	F
32	<i>Amaranthus spinosus</i> L.	Amaranthaceae	Herb	O
33	<i>Ampelocissus latifolia</i> (Roxb.) Planch. / Amraula	Vitaceae	Climber	O
34	<i>Andrographis echiooides</i> (L.) Nees	Acanthaceae	Herb	C
35	<i>Annona squamosa</i> L. / Sitaphal	Annonaceae	Shrub	O
36	<i>Anogeissus latifolia</i> (Roxb. ex DC.) Wall. ex Bedd. / Dhawa, Daawada	Combretaceae	Tree	C
37	<i>Anogeissus pendula</i> Edgew. / Kardhai	Combretaceae	Tree	O
38	<i>Apluda mutica</i> L. / Rathar	Poaceae	Herb	F
39	<i>Aristida adscensionis</i> L.	Poaceae	Herb	F
40	<i>Aristida redacta</i> Stapf	Poaceae	Herb	O
41	<i>Aristolochia indica</i> L.	Aristolochiaceae	Herb	R
42	<i>Arthraxon hispidus</i> (Thunb.) Makino	Poaceae	Herb	F
43	<i>Arthraxon lancifolius</i> (Trin.) Hochst.	Poaceae	Herb	F

44	<i>Arundinella pumila</i> (Hochst.) Steud.	Poaceae	Herb	O
45	<i>Arundo donax</i> L.	Poaceae	Herb	O
46	<i>Asparagus racemosus</i> Willd. / Satawar	Liliaceae	Climber	R
47	<i>Atylosia scarabaeoides</i> (L.) Benth. / Vankulthi	Fabaceae	Climber	C
48	<i>Azadirachta indica</i> A. Juss. / Neem	Meliaceae	Tree	O
49	<i>Bacopa monnieri</i> (L.) Wettst. / Bramhi	Scrophulariaceae	Herb	R
50	<i>Balanites aegyptiaca</i> (L.) Delile / Ingudi	Balanitaceae	Tree	O
51	<i>Baliospermum solanifolium</i> (Burm.) Suresh / Danti	Euphorbiaceae	Herb	O
52	<i>Barleria cristata</i> L.	Acanthaceae	Herb	C
53	<i>Barleria prionitis</i> L. / Katsariya	Acanthaceae	Shrub	O
54	<i>Bauhinia racemosa</i> Lam. / Kathmhahula	Caesalpiniaceae	Tree	C

Discussion

The present study reveals that 452 species of angiosperms under 300 genera belonging to 80 families are found in Ghughua Fossil Park, Madhya Pradesh. Out of these 97 species in 62 genera and 13 families belong to monocot and 355 species in 238 genera and 67 families belong to dicot (Fig. 1).

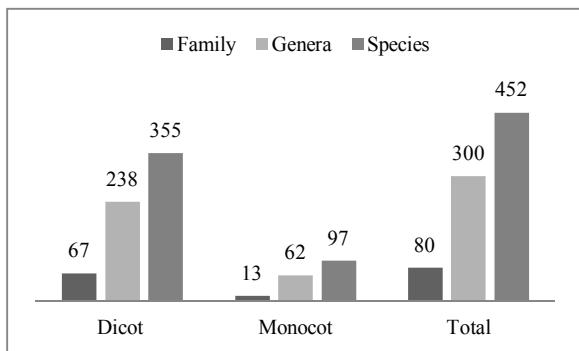

Fig.1. Status of families, genera and species in Ghughua Fossil Park

Dominant families (Fig. 2) with maximum number of species found in the park are Poaceae (48 spp.), Fabaceae (40 spp.), Asteraceae (27 spp.), Cyperaceae (25 spp.), Acanthaceae (21 spp.), Euphorbiaceae (19 spp.), Convolvulaceae (18 spp.), Malvaceae (15 spp.), Mimosaceae and Rubiaceae (12 spp. each).

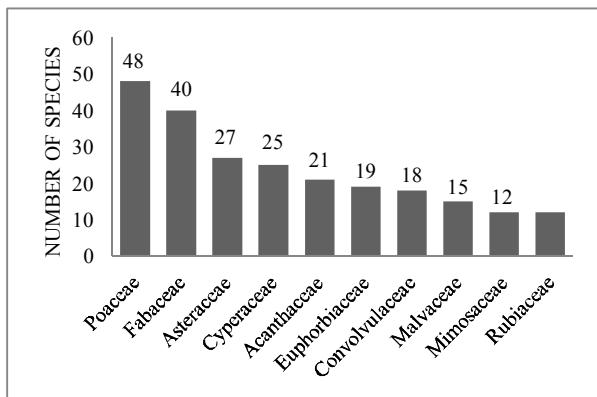

Fig. 2. Ten dominant families in Ghughua Fossil Park

An analysis has further pointed out that ten dominant genera (Fig. 3) with maximum number of species in the district are *Cyperus* (8 spp.), *Ipomoea* (7 spp.), *Desmodium*, *Ficus*, *Indigofera*, *Euphorbia*, *Phyllanthus* (6 spp. each), *Acacia*, *Corchorus* and *Eragrostis* (5 spp. each).

The 10 species are found in restricted area of the park and their population is very poor, represented by very few individuals. These are *Abrus precatorius*, *Aristolochia indica* L., *Bacopa monnieri* (L.) Wettst., *Cordia macleodii* Hook.f. & Thomson, *Gloriosa superba* L., *Gmelina arborea* Roxb., *Gymnema sylvestre* (Retz.) R. Br. ex Schult., *Litsea glutinosa* (Lour.) Robinson, *Plumbago zeylanica* L. and *Uraria picta* (Jacq.) Desv. Thus, the present findings are highly significant as these provide the latest status of angiospermic plant wealth of the park which will be useful to botanists, foresters and planners.

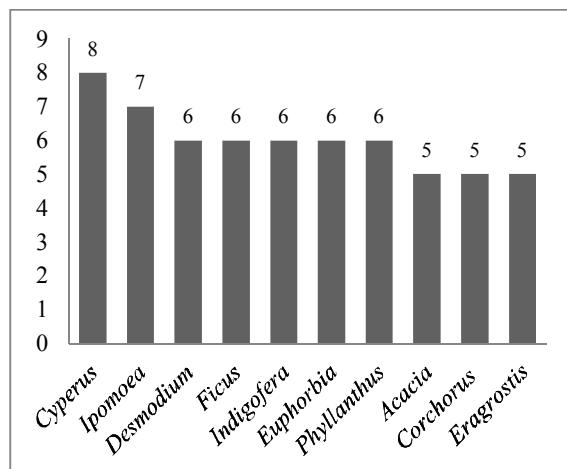

Fig. 3. Dominant genera of in Ghughua Fossil Park

Out of a total number of 452 species of angiosperms, 283 species are herbs, 40 species are shrubs, 83 species are trees, 43 species are climbers and 3 species are parasites in (Fig. 4).

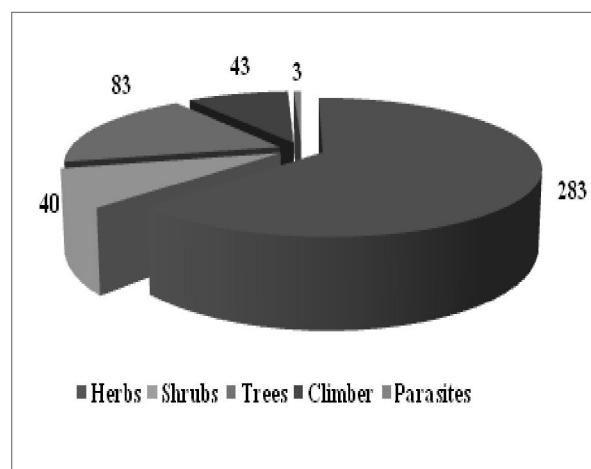

Fig. 4. Habit-wise distribution of flowering plants in Ghughua Fossil Park

The data of field observation have pointed out that 244 species are occasional, 159 species are common, 27 species are rare, 19 species are frequent and 3 species are planted in the park. (Fig. 5).

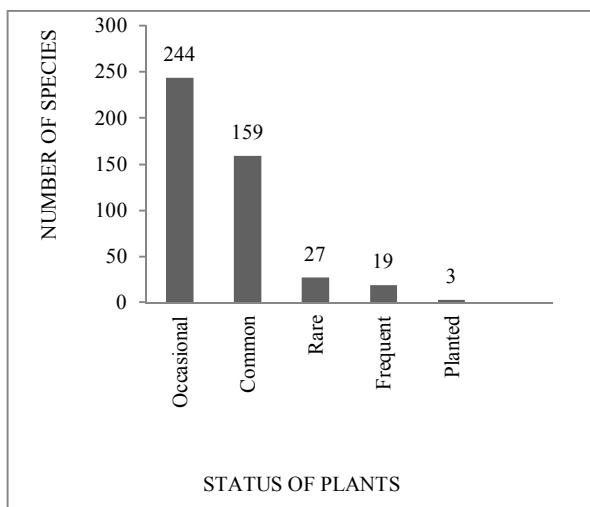

Fig. 5. Status of flowering plants in Ghughua Fossil Park

Acknowledgements

The authors are thankful to Director, Botanical Survey of India (BSI), Kolkata and Dr. G.P. Sinha, Head of office, BSI, Centre Regional Centre, Allahabad for facilities. We are thankful to forest officials of Ghughua Fossil Park for providing field support during the survey.
