**Abstract:** For example, the summer temperature is high, thunderstorms, overcast weather is low, the fish in the river is easy to die of hypoxia. Summer is also the most easy season for bacteria to reproduce, easy to get sick and die. Summer is the fish feeding season, fish and greedy, easy to support the death.

These three problems are consistent with the situation when the patient has a fever, first of all, the temperature, the water that the patient hangs and transfuses into the haze. It is also called heavy moisture in traditional Chinese medicine. Cells are prone to hypoxia. But still every day for patients to hang water infusion, transformed more haze. The small molecules of drugs in water infusion and vaccine drugs are deposited in various structures of the patient's body, which is easy to die like a fish.

And more small molecules. For example, bacteria in water are most likely to reproduce in summer, which will infect the disease. Even at this time, the temperature of the patient's body and the force of pushing and friction will process various materials, such as meat and potatoes with high iron content, into a plasma state, which will make the body more weak and even more painful. If the patient takes painkillers again, poisoning or aggravation of the coma and other big problems. Or the ion state is abruptly discontinued, so the patient is less likely to survive. This is also the question at the heart of the article

[Sun chunwu. **My understanding of the origin, prevention and treatment of new pneumonia virus disease 之三**. *N Y Sci J* 2023;16(2):18-38]. ISSN 1554-0200 (print); ISSN 2375-723X (online).

Key words: Oval chart, SARS, leukemia, cancer, AIDS, germs, viruses, climate change, infectious diseases, epidemics, Chinese medicine, hanging water infusion, media, prevention and control.

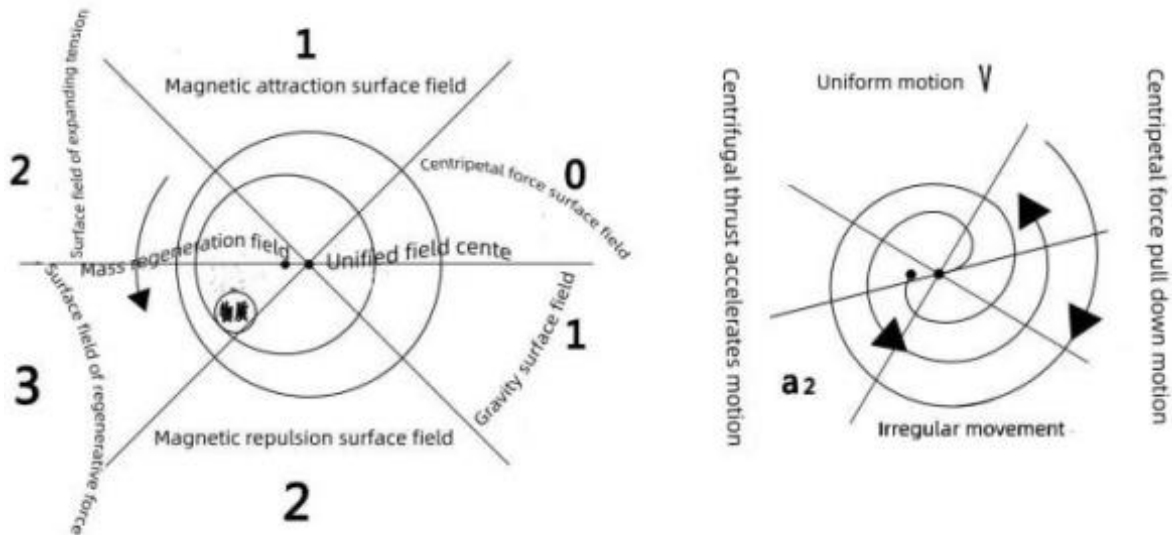

It is reported that since receiving the unexplained pneumonia sample from Wuhan on December 30, 2019, Wuhan virus Institute has been fully carrying out the pathogen identification, virus traceability, pathogen detection, antiviral drugs and vaccine development of new pneumonia virus in 2019. On January 2, 2020, the Institute obtained the sequence of the whole genome of 2019 coronavirus. On January 5, the new pneumonia virus was successfully isolated and put into the national virus resource bank according to the standard on January 9.

Neocoronavirus is a kind of pathogen that mainly

causes respiratory and intestinal diseases. There are many regularly arranged protrusions on the surface of this kind of virus particles. The whole virus particle is like a crown of an emperor, so it is named "coronavirus".

Why the new pneumonia virus disease occurred all over the world and why the virus mutated, we should further explore scientifically and uncover its face. The following ellipse chart for problem setting and problem solving is attached, which is also the yin-yang chart of China's Tai Chi dynamic field,

## Ellipse movement trend chart (See the figure below)

This ellipse first allows people to quickly understand problems such as galaxies, planets, seeds of plants, animal cells and various germs and viruses, such as how the universe has only diffuse gas, how to move in the air, how to replicate more energy, and how to evolve small viruses.

As shown by comparing the elliptical diagram to the hole field in the human heart, the external hot air flows into the diffuse air on the magnetic attraction surface field on the upper part of the heart, diffuses, accelerates from top to bottom, and is copied into more energy, which is also an inertial force. Because the outer side moves fast, the inner side moves slowly. Therefore, the swirling gas crosses the magnetic repulsion surface field and impacts upward to the gravity surface field and centripetal force surface field.

Because the gas is not supplemented by external energy force, it is consumed by friction, gravity and so on. Therefore, the gas only decelerates in the inertial force from bottom to top, gradually shrinks and bends to the center and makes elliptical motion. This elliptical motion is called centripetal motion in physics. Therefore, the centripetal force accelerates the vortex.

For example, a table tennis ball falls from a height of one meter to the hard ground. After each rebound, it loses about 30 cm, but this height still exceeds the center radius of one meter high by 50 cm. Therefore, the air flow surrounds the center height with shrinking vortices, which first forms a large outer circle like the ring formed by cosmic radiation, marking the birth of a quantity. The large outer ring is expressed as the mass of the irregular cell shell formed.

After polymerization, there are holes on the spherical shell, so there are small holes on the shell of the cell wall and large holes inside. With a hole, it plays three roles. On the one hand, it makes the temperature and pressure inside and outside the shell hole different. For example, some patients hang water for infusion every day, and the water molecules entering the body are transformed into hot air flow by the feverish temperature, accelerating the vortex around the low-temperature eccentric hole field in the cell. It is copied by the inertial force of the system into a spherical hole like a ball. The excess gas is thrown out of small holes in the cell wall by centrifugal force. Because it is blocked by the skin, unlike the hot air in the body, it rushes out of small holes on the skin and is swirled into hairs or long tubular hair.

The airflow that rushes out of small holes in the cell wall swirls into crowns one by one, and the centripetal vortex on the crown disk transforms into a large suction. More hot airflow in the skin, including small drug molecules that enter the skin through water infusion, is sucked into the center of the crown disk together, and the vortex is accelerated to surround and replicate into a spherical mass on the low-temperature eccentric hole field in the cell. It is the shell of another small virus. But the patient is still hanging water for infusion day by day. There are more and more spherical clusters in the eccentric hole field in the cell.

This eccentric hole field, like the length of the lever arm, is a field that reproduces more energy from the mass. Therefore, no matter how good or bad, the small drug molecules in the linked water infusion are vortex to a piece, which is transformed into

temperature when accelerating the vortex, A big ball that transforms small balls into empty protein shells by vortices is a virus. Just like the origin of everything in the Taiji book of heaven, for example, the gas ball formed outside the center of the solar system in the early stage, such as Jupiter, evolves into a liquid ball such as the sun when accelerated, and is accelerated into a solid state such as the earth. When the air flow vortex on the earth surrounds the center, it evolves plant seeds, Due to centripetal and centrifugation inside the seed, the pushing friction force is large, and the transformation temperature is high. Small molecules on the spherical mass evolve into animal and human cells like protein liquid.

But the size of the virus depends on, for example, the number of times the patient hangs water for infusion, the type and amount of drugs used, and the patient's physical strength or geographical environment. For example, in hot or cold regions of Africa, the quality of the virus evolved in the patient's body is also different. However, it is only parasitic in cells and can only be replicated by the cell eccentric hole field system to produce more energy, that is, more small viruses. And it loses its ability to replicate when it leaves the cell. And it is in the cell, even the autopsy did not find, such as the heart was infected with the virus. Because the mass of the virus is only an empty protein shell, it is dead without force.

Moreover, the holes between the cell walls synthesized by small cells and small cells or by small

molecules and small molecules are smaller. It is like a small hole between a cocoon and a fruit wound by a silk circle when the cocoon goes up the mountain. Moreover, the shell synthesized by small cells and small cells is harder than the inner wall after being heated. It is not allowed for foreign coronal and other viruses to run in and out. At least one coronal on the virus will be stuck in the hole hole on the cell wall. The virus can't even move itself. How can it infect other things?

Look at the first picture below. There are also small hole fields around the inside of the fruit, just as there are six state hole fields large and small on the elliptic chart. The space of each field also has three kinds of properties, large, medium and small, and how many small molecules are copied in the field. And there is also a large eccentric hole field in the middle of the fruit.

When the external hot air flows around the centripetal vortex and enters the low-temperature eccentric hole field, it is copied into more small molecules by secondary vortices. It must be continuously thrown out by the centrifugal force of the system, forming cyclone arms with different energy centrifugal forces. It is also based on each centripetal force to accelerate the vortex around, transform the centrifugal force, throw out the force, take their seats and transport them to each small hole field, and the fruit will grow and evolve to maturity day by day.

The following is a photo of the real fruit.

This is a germ

The third picture is the coronavirus, which may be the Wuhan Virus Research Institute. I'll download it to study it. Look at the first fruit and the fourth picture are the internal structure of the new pneumonia virus. It's the same as the internal eccentric system structure of the above elliptic diagram. Because the ellipse was discovered 40 years ago when I invented the eccentric vortex engine, I drew a sketch and wrote it in the comprehensive discussion on unified field theory published in the Journal of science and technology consulting guide and the article "my

understanding and application of Tai Chi diagram", which is the current article, the ellipse. Forty years later, foreign experts found that there is also a centripetal cyclone in the center of the black hole, and there is also a slightly larger cyclone thrown out by centrifugal force. Therefore, the diffuse air flow of the black hole and the centripetal vortex accelerate around and convert into suction, so there is universal gravitation. Newton only did not move to produce gravity, while physics master Ritchie was a little moving to have gravity.

My centripetal and centrifugation belong to the movement of two or more points around each other, so that they can be transformed into centrifugal force to throw the cyclone out of the heart. For example, more white blood cells will be transformed into red blood cells and stored in the human body. If the centrifugal force of the system is small and other factors, throw out the heart and give birth to leukemia.

And the food that men and girls eat day by day is transformed into gas and evolved into other elements such as protein. Small molecules, including drugs in sick hanging water infusion, also exist in the body, although it also makes children grow tall and evolve into old people day by day. Inevitably, there are also side effects in the internal process of the body. Just like the mobile phone surfing the Internet every day, there are too many wastes such as garbage, which need to be cleaned up manually. Otherwise, it will be difficult to surf the Internet without cleaning up.

For example, more and more small molecules are stored in some cells, and they evolve into high-quality cancer cells, which are also medical terms. Just like the cells in the human body first, and then the sperm Mao Zi. But more small molecules are stored in cancer cells. Its vortex force is greater than that of cells. It sucks all kinds of small molecules in the body, such as garbage, into cancer cells. The micro heat transformed by its vortex also evolves some small molecules into elements or proteins.

However, some people get sick as usual due to various reasons. There are too many small molecules and other garbage in water hanging infusion, but the speed of cancer cells can only clean up most of the garbage in the body, and some small molecules are still stored in the body, which will circulate with the blood.

After water hanging infusion, it first increases the weight of moisture in the patient's body, and the meridians are not unblocked. In general, children have lower blood viscosity and less incidence rate. In the past few decades, the elderly have been left with more small molecules, red blood cells, white blood cells, platelets, water, sugar, fat, protein, potassium salt and calcium salt mixture. It has evolved into that the blood viscosity of the elderly is relatively high. Moreover, when the Qi and blood of the elderly move to their legs, they can't climb the stairs.

There is an old saying in traditional Chinese medicine: a thousand colds are easy to go, but one dampness is difficult to get rid of. Blowing air conditioning, eating cold food, improper diet and humid living place are the culprits of aggravating moisture in the human body. If it cannot be discharged in time, it will hide in your body, resulting in hidden dangers. If the moisture goes up, there will be spots and acne, and the face will be glossy. If the moisture

is injected, it will cause a series of gynecological diseases and damage the body. Moisture in the skin will cause skin diseases such as eczema. When moisture enters the bone, it will cause arthritis, peri-arthritis of shoulder and so on. Moisture will first invade the spleen and stomach, then stay in the kidney, and then moisture will invade the heart and lungs. At the same time, moisture will invade the liver, gallbladder, bladder and viscera.

Therefore, some poor quality cells, cancer cells and small molecules are sucked into the center by the vortex arm of gene centripetal force and thrown out by the vortex arm of centrifugal force to replicate more poor cells. These cells also left the password of hanging water infusion memory. If you encounter cold weather or fear of cloth environment, cells with poor disease resistance will get sick immediately or even more seriously.

The patient went to the hospital for examination. According to the medical book, the doctor gave birth to leukemia or cancer, even the spiral arm of the gene was intermittent, and the gene chain was destroyed by the virus. It may be that smoking, drinking, drinking tea, or eating fruits and vegetables that should not be eaten at ordinary times. When leukemia or cancer is treated, radiotherapy and chemotherapy is the best treatment.

Radiochemotherapy drugs must hang water for patients to form a new molecular structure of the body, so as to ensure the survival and recovery environment of living cells.

Human body is a complex system engineering, such as more water, less water, high and low water temperature, fast and slow water flow rate, entering the body and stomach for treatment. Water can relieve pain, and water will aggravate the condition. If you hang water for infusion for a long time, it will at least destroy the work of the system in the body.

Why is this world-wide outbreak of new pneumonia coronavirus disease? For example, Wuhan is a big province in China, and all walks of life are developed and busy. Especially before the Spring Festival, the patient in Wuhan went to the aquatic product ice warehouse early every day to load and transport goods. His body was so busy that he often sweated and didn't take a bath and change clothes in time. Moreover, there is a crematorium not far from their residence. The dust from burning corpses diffuses in the air and is breathed by plants, animals and humans. Or these foods will also be eaten by patients at ordinary times, including the accumulation in the body for decades, some cell residues of metabolic division, or volume contraction, apoptosis or shriveled small dust in the body, which is not excreted by defecation and defecation. In addition, the cotton padded clothes and shoes worn in winter are

heavy. When you get up early every morning, your body is seriously cold and tired, resulting in fever and lung discomfort,

For example, in Yangzhou Daming Temple before 1976, when Japanese distinguished guests came to implement the 1000 year old war monk's home visit, after drinking Yangzhou Pingshan specialty green tea, they asked the guide, is there a crematorium here? Because the tea smells of cremated corpses. The guide contacted the foreign trade bureau. It was found that there was a Pingshan tea farm behind the Daming Temple. There was a small crematorium on the hillside not far away. The crematorium was immediately moved far away from Xiaomao mountain. Since then, foreign guests said that green tea was good in color and delicious in taste.

Therefore, if the new pneumonia coronavirus is an infectious virus, it will not spread to New Zealand countries tens of thousands of kilometers away at the beginning of last year. First, many people in Wuhan should be infected. Infectious diseases, and a large number of animal incidence rate and mortality rate to prove. Because the living environment of animals is worse, there is no doctor to treat them.

Incidence rate of China novel coronavirus pneumonia is not reported by the recent Korean people. Or maybe they don't believe. Their media rarely reported news about the epidemic and terrorist events, and the people seldom thought about it. And when they are sick, it is impossible for doctors to use drugs for the virus first, hang water for infusion, and a new pneumonia virus cannot evolve in the patient's body.

In addition, there was a family of six people in Wuhan at the beginning of February last year. All the adults were ill and had a fever. But a ten-year-old child did not have a fever. It is not in line with the nature of infectious diseases. With disproof proof proof proof: If the expert is correct, then the epidemic area more than a year time, at least most people are infected! The fact is most people are not infected! Moreover, from last year to this year around the world, the reported incidence of the new type of pneumonia coronavirus in rice has not been rising every day in any country, so it is not an infectious disease. Then there is no need for such measures as strict epidemic prevention as sealing off towns and districts, the people live in peace and happiness, less economic losses and other problems occur. There are at least five reasons

Since February, I have also been reading the news of the epidemic on the Internet, such as the headlines and some express letters every day. For example, when I saw the epidemic in the United States, Britain, Italy, India, South Korea, Singapore and other countries, especially after the British Prime Minister, President Trump of the United States was also ill, I followed every day and made comments, predicting

that they should only drink hot water and take oral western medicine tablets, sleep in hot bedding and rest more. Just a few days to get over the cold. Another Indian to bathe in the Ganges river, surely can cure disease. Not contagious, because India is a tropical area, the temperature of the river water may be more than 50 degrees, the same as the bath water temperature. Other Indians eat cow excrement treatment, may be less side effects than hanging water infusion treatment. I have also studied the epidemic information of different countries in common, one is that the media exaggerated the incidence and mortality of various diseases, reported the incidence and mortality of COVID-19 epidemic, and the other is that they are all hanging water infusion, which makes the recovery period long, and brings about an increase in mortality and other problems.

More than 10 years ago, President Bush responded to my email asking for the immediate cessation of radiotherapy and chemotherapy for leukemia, cancer, and AIDS. If national hospitals pay more attention to the problems such as the volume of water and infusion, the consequences of causing viruses and mortality will be reduced. I have the experience to end the pandemic around the world as soon as possible. First, the epidemic articles were sent to the National public Complaints and Visits office by express mail in October 2020.

Another Wuhan patient evolved into the new pneumonia coronavirus disease, Zhong Lao only asked the cadre who reported the epidemic, is it an infectious disease? One by one countries can claim China's infectious diseases, compensation for their huge economic losses. Beijing lawyer asks how to win a case.

I said that foreigners should directly show evidence of human-to-human transmission. Because Wuhan has not found a large number of patients infected with the new pneumonia virus disease.

If I don't admit that it is an infectious disease, I will win the lawsuit, and I will write articles about the epidemic at the annual meeting of scientists and economists at any economic cost, and I will also submit articles to various magazines. After publishing articles on the epidemic in English in Asian magazines, the United States and other countries, various countries were busy to end the epidemic. Sorry to ask China to compensate them for their huge economic losses. Proved to be a seasonal epidemic. Do not do nucleic acid testing, vaccination and closure of the community and other things. The outbreak ended quickly.

for the incidence rate of the worldwide epidemic and the long time. Just as the earth has been rotating for more than 14000 years in the 25800 year cycle around the rotation pole, the hot air Hou Gang in

summer has just ended, and the inertial force makes the earth enter an irregular speed and slow down from bottom to top. For example, the glaciers in the Arctic are constantly melting by the high temperature in summer. These cold air rushed into the sky, mixed with dust and germs scraped from Yidao in summer. When they accelerate towards the equator, they collide with human activities in nature, such as various locomotives, aircraft and special warships in various regions, transforming strong hot air into the sky. It increases the atmospheric circulation movement in autumn and winter, prolongs the climate in some areas, such as dry or cold, and evolves various natural disasters. And now countries use more modern products such as air conditioners, so the incidence rate of winter and summer is much higher than that of autumn.

On the other hand, climate change also includes changes in social development. For example, when the world entered the cold war period, the productive forces of various countries developed again and the people's living standards improved continuously. In this way, the leaders and people of various countries increased their self-confidence, evolved various things and formed new strength to rush into the sky. For example, in 2011, the United States supported anti-government organizations, while Russia did support the current government, which led to the long-term tripartite war in that war, resulting in the destruction of a large number of infrastructure and residential buildings in Syria. By September 6, 2018 to calculate, Syria alone will lose as much as \$300 billion in the war! Some observation organizations believe that in the past seven years, at least 400000 people have died in the Syrian war, and a large number of people can only be displaced and smuggled to Europe and other countries to become refugees. However, some countries and people, such as the United States, flow displaced refugees. The U.S. government only cares about its own interests and builds a wall to block the influx of refugees into the United States. And how immoral it is for other countries to treat refugees in different ways.

The contradictions between countries and people intensified, and the refugees complained, and the air rushed into the sky. As Napoleon of the French Empire said, "it is the incompetence of force, and ultimately force is always conquered by thought." the sky rushes the selfish air currents of human beings such as endless greed and pursuit of development and growth into the sky, which is copied by the sky into a more powerful cyclone, forming an air stream of thunderous power like a tornado, and then returned to countries all over the world as a warning.

Therefore, the formation of cold and hot climate changes in different regions will make the incidence

rate and mortality rate of different countries in the world different. This is the origin of a disease incidence rate.

2, what is the novel coronavirus pneumonia disease? If so, is it a plague in traditional Chinese medicine? Or western medicine determines seasonal cold or virus? Or infectious virus? No real case and fact, such as the incidence rate and mortality of animal diseases have been occurring all over the world. It also makes the people of all countries, especially close relatives, infected first and increase the mortality rate before they can be classified as infectious viruses. The incidence rate of misdiagnosis is two.

3. In 1931, the American doctor drbaxbr cooperated with his companions to produce the world's first bottle of commercial infusion products in the transformed old garage. In the Second World War, it was widely used in the rescue and treatment of dehydration, excessive bleeding, fever and bacterial infection of many wounded. For example, the infusion product can reduce the patient's fever immediately within 30 hours, infect the wound, and use western medicine, especially for bacteria. At that time, the side effects of hanging water infusion on chronic diseases and virus after long-term infusion could not be found in a short time.

For example, in today's world-wide new pneumonia virus disease, the real virus is kidnapped in the hole field of the eccentric system of cells. It is also a secondary cold disease of patients from children, although they are cured by hanging water and infusion. However, there are some small drug molecules accumulated in the body, which can not be cleaned up by western medicine. It is also easy to get sick when encountering the same conditions, and it is more difficult to cure the disease with drugs such as antibiotics.

Because it is not an infectious disease, you must drink hot traditional Chinese medicine soup, or drink more hot water and oral western medicine. After gastric treatment, the useless ones are excreted with the urine. When the hot medicine soup air flow enters the low-temperature cell wall and is divided by measurement, the hot traditional Chinese medicine soup that the patient drinks, first, the medicine fills the intestines, first replenishes a large amount of hot water for the patient; second, the traditional Chinese medicine is boiled and dissolved in the hot medicine soup at high temperature, which can be absorbed and transformed into the body and various organs; third, it can be scientifically distributed to the organs that need it after gastric treatment. Four pairs of patients with fever get more calories and drugs to speed up the removal of moisture from the body.

On the other hand, hot medicine soup enters the cell and is transformed into more Qi by temperature.

With the force of Qi, it is pervasive. For example, a bowl of hot traditional Chinese medicine soup is generally 30 times heavier than vaccine water, and it is hot gas water. Just like the qigong master's outbreak of greater force, that is, the hot gas of hot medicine soup makes the cells expand greatly, pushing one cell to another will expand tens of billions of cells in the body, and the hole between cells will be smaller, so the patient will increase his strength and speed up his recovery. Moreover, foreign harmful substances, such as viruses, are more difficult to enter between cells, so the hot medicine soup of traditional Chinese medicine is much more effective than hanging water, infusion cold water and vaccine cold water, and has no side effects.

The small molecules of various drugs that can be used to treat diseases by hanging water and infusion can not digest how much is stored in the patient's body, so they are vortex centripetally into the low-temperature eccentric hole field in the cell, constantly providing energy supplement to the virus. A few days later, the virus has evolved into new viruses such as various variants, which is more difficult to cure.

But the novel coronavirus pneumonia virus has not been found in cells and autopsy, such as heart and other organs, which infect the virus. Because viruses are not germs. If there is no force on it, it is like a dead object.

If virus experts artificially invent germs or viruses, they have a certain political purpose. The virus produced is a living body, which can be transmitted to animals and people.

But the technical level of Wuhan laboratory can not reach the virus in the dead body. Therefore, the virus is not a problem made by Wuhan laboratory.

Why the incidence rate of special mortality in the United States is increasing year by year, which is several times what it was two hundred years ago. It is known that today is not an acute infectious disease infected by bacteria. Long-term use of hanging water infusion can cause serious side effects and seriously damage the body system of patients.

But their medical experts also popularized western medicine technology, especially water hanging infusion, to hospitals all over the world about 100 years ago, and did not specify in detail what to pay attention to. Because hospitals in various countries do not understand the specific new knowledge in this regard, they only see that western medicine has a particularly good effect on the treatment of bacterial infections. Some diseases recover quickly. Moreover, it is convenient to use and generates income and profits for hospitals. Doctors follow the teaching methods of the ancestors of western medicine to hang water and infusion for patients, which also gives birth to some new diseases

and has a high mortality rate. Indeed, the experts of the old ancestors deduced that all kinds of new diseases may be born, such as lung cancer caused by smoking, liver cancer caused by drinking; Environmental pollution and other problems, they invented advanced medical equipment to check and treat diseases. National life insurance companies are also willing to do this big business.

The incidence rate of the disease is increasing. In 2021, the incidence rate of the disease is even more serious than that of 2020. It also hurts people with various diseases all over the world, and even people have nowhere to complain when they go to wealth. It also makes the world's tobacco, wine and tea factories, vegetable farmers, fruit farmers and other hard-working people, resulting in hundreds of thousands of people losing their jobs and no economic income to support themselves, and the national finance has little income. It is unclear whether the experts who invented hanging water infusion have no intention or intention.

At the same time, the United States uses no actual curative effect, nucleic acid survey morbidity, this approach seems scientific. It actually neglects more than 100,000 people a year, seven or eight every winter or summer. For example, the genes for female centripetal rotation are weak, do not follow their heart, will be afraid of viral infection, or because of busy work sweat. Drink a cold drink to lower your body temperature. Or blowing air conditioning for a long time and the temperature is not accurate. Winter and summer outside the temperature difference, so that the body into a heavy conversion of moisture, meridians are not smooth, they go to do nucleic acid examination. They caught cold because of the long queue. Through nucleic acid testing, a few patients out of millions are identified as asymptomatic or positive patients, and suspended daily water infusion to kill the virus, the epidemic will never end. The third direct cause of the disease is traceable.

Experts have done nucleic acid tests should belong to whatever disease, is what disease. We can't fool patients with a suspected positive case on the edge of the ball. You should directly state that after nucleic acid test found no patient with human-to-human infectious disease. The nucleic acid test can be done, and it's done right.

Cadres do not need to do the district closed road all the strict prevention measures. All walks of life busy hard money, money hair spirit, a positive pressure hundred evil, there is no epidemic of infectious diseases in China. Cadres and people, also thank nucleic acid testing, for our epidemic prevention work to make the best assessment! In the future every winter and summer peak incidence, do a nucleic acid test is not infectious disease is necessary!

The fourth reason for tracing the source is that I

am sensitive to discovering many new problems on the Internet every day. When incidence rate of COVID-19 disease is reported to be zero when Wuhan reported that the disease has been cleared, the Internet has emerged, such as the ancient Chinese literature search paper, which now has news of the virus being developed into a new virus in the body of a British hospital, and the good drugs are all killing the virus and being infectious.

In addition, I later found that the Internet said that there were hundreds of millions of locusts in Africa and a large number of crops would be reduced. I estimated that I would increase the publicity of locusts and even locusts would fly to China. Therefore, I paid attention to this information every day. Sure enough, the Internet said that hundreds of millions of locusts in Africa would fly to India and China, China's agricultural crops would be eaten by locusts in autumn, and grain production would be greatly reduced

Later, I found on the Internet that Africans had a more serious infectious viral disease, with a mortality rate of 100%. It was also transmitted to animals. I saw that orangutans may be shooting their heads with their hands on the video. Because I have suffered from various diseases that are not easy to cure, such as brain cancer pain. I have cured various diseases as soon as possible and sought medical treatment everywhere. I know that orangutans may have this disease. They may not have "crossed the river" and go through the Yin difference. The immortal is also a witch's medicine. After eating it, they immediately lose their acid-base balance, such as more severe pain, madness, and even death. No doctor can cure it. [maybe it's their master who has the antidote for crossing the river. The patient needs to use a certain amount of medicine and the pain of the disease. When it reaches a certain point, it is recommended by small immortals, such as Tianshi Zhang or Weituo, who specializes in catching ghosts and demons. They take out the antidote to cure the disease. But orangutans, including people with this disease, don't know what poison to eat and die. But it's not an infectious disease]

But without thinking about the complexity of the problem on the Chinese Internet, it immediately forwarded it to the Internet, and it fell into the trap. Moreover, it is the peak period of winter and summer that the incidence rate is increasing. There will always be a population of tens of millions of people. There are dozens of people who are not careful, such as being cold or cold, too much, or having long time to blow air conditioning and mental strength. Incidence rate and mortality rate will increase.

The incidence rate of novel coronavirus pneumonia is not reported by the media. It is the same result as a nationwide murder case in a month.

In addition, science and technology are more

developed now, and artificial viruses can also be created, which will increase the incidence rate and mortality rate.

Moreover, hundreds of thousands of new species and viruses are produced in nature every year, and tens of thousands of old species and viruses are eliminated and died naturally.

The incidence rate of infection is ninety-five percent. The best vaccine in the United States is only about one hundred thousand.

The incidence rate is incidence rate of more than twenty or thirty people in 10000 persons. If the calculation is done in one hundred thousand people, the incidence rate will be at least over 100.

And people who used to be in good health also have disease rates.

The vaccine is specially injected into people's bodies, and experts call it the tablet function. But the human body is an independent complex system that does not allow you to build vaccines like new genetic systems that interfere with immunity. Two heart vortex suction is large, small molecules of vaccine drugs will be sucked into the heart wall, by a number of small cells combined into a small hole in the heart wall, strong property, stimulate the heart wall a small hole hole, long-term prone to heart disease. And the lungs inhale it. In addition, vaccine drugs circulate with the blood in the body, but the holes in the blood vessel wall are smaller, and the small molecules of vaccines and drugs with water infusion can circulate with the blood, which will consume more blood circulation force for a long time, and also easily cause thrombus and other diseases. So the incidence in the United States today is several times what it was 200 years ago

Before vaccines were invented, viruses were dried at high temperatures and crushed into individual pieces so that they could never be replicated. These smaller dead individuals, injected into the body. If you stay in the body somewhere dead individual more, it means that this position such as the heart vortex suction heart wall holes, long-term easy to get sick. Although it cannot be replicated after being crushed, it also releases medicinal properties that experts say boost immunity. The planting of these individuals is like the frying of seeds, so that these individuals cannot be activated. There are long-term side effects.

And the smaller individual after powder, it is easy to enter the cell wall holes, and into the finer meridians and blood vessels. Just like there is dust in the bearing bead groove, the bearing is inconvenient to rotate - like. This time in Shanghai, over 80 years old did not get the vaccine deaths, "accounted for 90 percent of the vaccine deaths. Before vaccines were invented, viruses were dried at high

temperatures and crushed into individual pieces so that they could never be replicated. These smaller dead individuals, injected into the body. Just like there is dust in the bearing bead groove, the bearing is inconvenient to rotate - like. This time in Shanghai, over 80 years old did not get the vaccine deaths, "accounted for 90 percent of the vaccine deaths. According to the annual rate of death, people in their 40s and 60s die prematurely after receiving the vaccine.

It was the theory of the vaccine that went wrong

Otherwise, if we don't sum up experience now, there will be a major epidemic every more than ten years in the future, such as when there are few sunspots, and the responsibility for the epidemic will be put on China's back.

Of course, from the perspective of traditional Chinese medicine, every medicine has three poisons. If it is not an infectious disease, it is only an epidemic, make the vaccine medicine into oral medicine or aerosol inhalation epidemic prevention medicine, or make a plaster, such as sticking to the navel, or oral epidemic prevention medicine in advance. It's not necessary to inject vaccine. This important event requires further technical supervision by experts.

And there is no detailed introduction to this aspect in medical theory, and there are strict requirements for the water for water hanging infusion. The medical instruments can not see how the Qi moves in the body and the micro movement of water into the body. Therefore, doctors can treat diseases with drugs according to medical theory. Otherwise, no one can bear the responsibility for medical accidents.

Novel coronavirus pneumonia, which is used by thousands of doctors in Wuhan, long time wearing heavy protective clothing and heavy mental pressure, is also busy day and night for the treatment of new crown pneumonia disease for patients. Therefore, any doctor hopes to cure the patient as soon as possible. It is not the responsibility of the doctor, but the problem caused by the imperfection of medical theory and methods.

For example, in some chemoradiotherapy and hanging water infusion, drugs such as glucose are delivered to the patient's body for reception, and the patient's spirit is much better immediately.

In medical textbooks, patients with chronic diseases can be treated with water according to their condition. If there is an effect after three days of infusion, they should also take traditional Chinese medicine or oral western medicine first. They can only hang water for three days as a course of treatment every three to four days. Moreover, the speed of hanging water can not be too fast, that is, the hanging bottle can not be hung too high. Patients with normal hanging water can only hang water together a day, It is best to keep the water temperature as high as the patient's body temperature, even one or two degrees higher, and the fever reduction effect will be better.

The water hanging infusion can be calculated by measurement. Assuming that a person weighs 130 kg, the additional water received in the patient's body cannot exceed his weight. If the patient hangs about 1 kg of water every day, the continuous water hanging infusion for a month is 30 kg. If you hang water continuously for infusion for five months, it is 150 kg of water. The small molecules of moist drugs in these water may be three or five kg in total. The more it accumulates, the more it is not stored in the stomach. It cannot be processed and excreted with urine and urine. But the small molecules of moist drugs in the water exist in the patient's body.

For example, some animals, when it rains and snows in winter, suddenly have fierce fighting or long-distance running, their bodies shed a lot of sweat and are sleepy, so they lie down to rest or sleep. When the animals are hot and cold, they have a fever, and they also evolve new viruses, but the viruses do not necessarily cause the death of the animals. Because the animal is ill, no doctor treats it. It's better to sleep for a few days.

The cold water that can be injected into the patient's body by hanging water will aggravate the moisture in the patient's body and obstruct the meridians. The second big problem is that the small molecules of drugs are stored in the skin, but the body temperature can not convert the small molecules of drugs into proteins. Some small molecules of drugs exist in the body and circulate with the blood. These more and more solid cold small molecules freeze and bond the blood, such as bile white matter and white blood cells, into small pieces, and hang water for infusion day by day, which agglomerates into large pieces, destroying the structure of operation in the blood. In addition, there are cells in the patient's body that constantly metabolize, divide and shrivel, apoptotic and shrink things stored in the blood. It can increase the expansion speed of blood vessel wall, If it is not condensed into large pieces so fast, the blood cannot circulate. If it is treated by mistake, it is easy to cause the patient's death. Third question.

The fourth problem is to hang water for infusion.

Excess water will also flow to the lungs. But the respiratory stomatal holes between the lung walls synthesized by cells on the lung are also small. The speed of water hanging infusion into the lung is slow, and the small molecules in the drug vortex outside the lung membrane to form a water mass, which blocks the flow of water into the small holes on the lung. The water in the patient's lungs is transformed into phlegm by the temperature of fever, and the patient has problems such as cough and dyspnea. If oxygen aids are used, it will even aggravate the condition.

At this time, the best doctor is himself, do not agree to hang water infusion, take medicine with traditional Chinese medicine, leftover heat to drink traditional Chinese medicine soup, or eat medicine prescribed by Western medicine, drink more hot water to take medicine, even wear a hat on the head in winter, wear socks on the feet, use less air conditioning, sleep into a hot bed seriously every day to rest or sleep, after taking medicine every day in the middle time, can also drink more hot tea. Or eat less and drink hot bean porridge many times, because bean porridge after tea and when rice, and easier to absorb nutrients, including drinking hot tea water or drinking hot bean porridge, promote the system active transformation of heat. The final absorption of liquid water in the chest cavity gradually disappeared after a few days, and the condensed blood in the blood vessels began to dissolve the thrombus. The blood circulates normally and the disease gets better and better every day. Seriously ill do not hang water infusion. In case of consequences.

Why seriously ill people drink hot Chinese herbal soup, but also wear hats on their heads and socks on their feet. Because of the patient's long-term hanging water infusion, the patient's body moisture aggravated, although the hot Chinese herbal medicine filled the intestine, immediately make the patient's body moisture decreased, hot water gas into the cell on expansion, on a cell to push another cell, tens of billions of small cells are expanded, the cell and the cell between the point smaller, the patient has mental strength, accelerate the disease. Can the patient drink two cups of hot medicine soup every day, it removes less moisture in the body, if the patient wears a hat on the head feet wear socks, first make the patient body heat airflow does not run out from the head and feet, the patient sleeps in the hot bed, will remove more moisture in the body, and even the patient wakes up feeling a lot of disease. Of course, those in charge of the patient must observe carefully. On the one hand, they must not cover two beds in summer, and on the other hand, they must be aware of the material and tolerance of the sick person in winter. So, it's not the virus,

Moreover, the virus can not enter the blood vessel wall, or enter the blood vessel wall, and it will block the blood vessel in up to ten days. Like thrombosis, the patient's life is in danger. So, it's not a virus problem. If you pay attention to the problem of hanging water for infusion. It can also reduce heart disease, which is also the third problem. The fourth problem is the flow of excess water to the lungs.

If hospitals around the world pay attention to the use of water infusion, it can be predicted that the world will return to the proportion of the average mortality rate of patients two hundred years ago, and the incidence rate of various diseases will also decrease. At the same time, it also solves a big problem entangled in medicine and politics.

Otherwise, there is a kind of war and a kind of religious power in the world, which can achieve multi-functional side effects such as long-term hanging water infusion.

Of course, the benefit of wearing a mask, scientifically speaking, is not that it has a strong ability to stop the spread of germs. Instead, it neutralizes hot and cold air through the mask before it enters the lungs and body. It is cold in winter The weak person has been outside for a long time, and the clothes are not properly worn, every day when breathing air is assumed to be 15 degrees outside, but the body is about 35 degrees, is inhaled into the body lung cold air, such as every 5 minutes inhaled into the lung once, if there is no mask to stop, inhaling the temperature of the lung at least 15 degrees lower than the lung temperature, can calculate about six hours, how many times the lung cooling stimulation.

The inhaled air is also diffused to each organ for use, such as the most sensitive blood vessels are quite thin, it is constantly cooled, the blood flow in the blood vessels is slowed down, if one day the cold is particularly heavy, and the accumulation of cool air is combined, it is transformed into the body moisture gradually increased, the meridian is not smooth. In particular, some of the elderly and frail such as women and patients, mild feeling sleepy body no strength, severe cold or into a viral cold. Second, wearing a mask actually stimulates the lungs with less cold or hot air. Also reduce the mental pressure, do not think like the infection of germs into the body, enhance the immunity of ideas, people will be less sick. At home equivalent to constant temperature, you can not wear a mask. Otherwise, wearing a mask for too long may increase lung pressure and facial infection in the elderly and frail.

If the doctor treats the disease in isolation according to the viral cold, the consequences may be smaller. The doctor can treat it as a positive type of infectious disease in an extraordinary period.

And experts recommend that the district be

closed. Therefore, Yangzhou strictly controls and checks and seals up a small area. It has created a greater sense of terror and a greater impact on people's minds in Yangzhou. From then on, one hundred thousand people in Yangzhou have had several incidence rate, especially incidence rate in hundreds of people in chess rooms.

After a thorough investigation, some of the provinces and cities where the patients in the field have been exposed to the disease have a few incidence rate, and the incidence rate is increasing nationwide.

Are these patients infectious viral diseases? Or a virus cold? Is it the fault of patients, or the fault of experts who often suggest closing the community, or the fault of medicine or doctors, or the fault of superstitious experts in Yangzhou who suggest closing the community? Or was it originally to solve the pathogenesis and route of infection of the disease, a medical event of great significance, a scientific event, and an excessive operation by the media?

Maybe it's one of them, old lady Mao from Nanjing. Under extreme circumstances, she can't escape the curse by lifting it lightly. In fact, there is not enough evidence to prove that old lady Mao transmitted the virus to most of China. It is also the source of fifth effective incidence rate.

For example, there are several incidence rate of one hundred thousand people in winter each year, and the normal mortality rate is eight percent per year. About 300 million and 3 of the population of the United States is calculated. The incidence rate and incidence rate of death in this normal year are removed. Is that they know it's not a real infectious disease. Therefore, if the U.S. government does not force the closure of cities and communities, the total industrial output value will rise a lot in 2021. There was no decline.

The above examples have shown that the epidemic is caused by multiple factors. Why are morbidity and mortality so high? Is it a problem of animal transmission? Through the following data to explain the crux of the problem.

For example, 200 years ago, when people were sick, they drank hot Chinese herbal soup or plaster, acupuncture or cupping. People don't leave extra garbage in their bodies. As a result, people are less likely to get sick and get sick quickly. Today, the world is hanging water infusion treatment and do vaccination vaccine, so the side effects after long-term use, such as young people have less chance to have a variety of diseases, and young people have experienced a variety of factors with the growth of the year. Lead to more chances of illness.

For both men and women in their sixties fall ill on average every three years according to their health and general health. Over the past 60 years, more and

more small molecules from fluids and vaccines have been stored in various structures of the body. But the body's temperature doesn't convert small molecules of the drug into things like proteins. Some small molecules of the drug circulate in the body. Some of the small molecules are swirled into cells by the air stream, which also makes the child grow and gain weight. Since blood circulates through the body at least a few dozen times a minute, the weight of these small molecules depletes the body's system of force. Therefore, the greater the age of people's body, the more consuming force. If someone suddenly catches a cold or drinks cold porridge and cold rice, these factors will immediately make the moisture in the body heavier and heavier, and the meridians are not smooth, so that the blood circulation will be more blocked and the body system will consume more force.

Often sick people hanging water infusion or more than 20 years old people or wealthy families, or often blow air conditioning people. Or people with high levels of stress, including those who receive regular vaccinations and nucleic acid tests, are more likely to get sick or even more severely sick during the pandemic.

If the summer temperature is high, thunderstorm, overcast weather is low, the fish in the river is easy to die of oxygen. Summer is also the most easy to reproduce bacteria season, easy to catch disease and die. Summer is the peak season for fish, fish and gluttonous, easy to die.

These three problems are in line with the patient's fever situation, the first temperature, the patient hanging water infusion water into haze. It is also called heavy dampness in traditional Chinese medicine. The cells are susceptible to oxygen deprivation. But still every day for the patient to hang water infusion, into more haze. As well as small molecules in the infusion of water and small molecules in the injection of vaccines, more and more of them are stored in the various structures of the patient's body, which is easy to die like a fish.

And more small molecules and so on. In summer, bacteria are most likely to multiply in water and become infected. Even then, the temperature of the patient's body and the force of pushing and rubbing turn various substances, such as meat and potatoes with a high content of iron, into plasma, making the body weaker and even more painful. If the patient takes more painkillers, poisoning or aggravated coma and other major problems. Or suddenly stop the ionic state, so the patient is less likely to survive.

Therefore, the incidence rate of all countries in the world is increasing. Increasing mortality is not surprising. Indeed, today, if the epidemic is positive, it will be treated and prevented as an infectious disease. They vaccinated healthy people who were not ill. But

for the small molecules in the vaccine, it has a greater drug effect than hanging water infusion, otherwise it will lose the anti epidemic effect after a few months. But if it is injected into the body, it will add a burden to the body. The incidence rate and mortality rate all over the world is more than a year.

It is also hoped that the mortality of patients with colds and fever and geriatric diseases in normal years can not be uniformly reported on the epidemic situation of coronavirus and published on the Internet, otherwise the consequences should be punished by law. It is also the source of fifth effective incidence rate. Through the above examples, western medicine is good at treating infectious diseases and acute external material diseases.

However, western medicine uses hanging water infusion to treat systemic chronic diseases, and there are no side effects and consequences in a short period of time. This is the problem of imperfect medical theory.

Traditional Chinese medicine has a particularly good effect on systemic chronic diseases such as cancer. For thousands of years, traditional Chinese medicine has only established theories based on Qi and blood. It is ignored that about 70% of people's body is warm water, and only a small part of Qi and blood. Moreover, the supplement of raw energy is still the water from which they are transformed. For example, the temperature in the cell will convert hot water into air. With the air force, it is omnipresent. It will expand the cells in each person's body, push one cell to another, push billions of cells to expand, and the space between the cell walls will be smaller. The patient will have the spirit, increase the strength, and speed up the recovery. It's like the force of the wind to form waves in the sea.

Therefore, the theories of traditional Chinese and Western medicine must be unified based on physics, and after the medical theories of both sides are improved and improved. Flexible use of water during treatment can achieve better treatment effect and no side effects.

To sum up, this epidemic situation reflects a misdiagnosis, which identified seasonal plague as infectious disease for treatment and prevention. Second, the wrong treatment should be hot water medication, which can be treated by hanging water infusion, which will lead to the problem of consequences for a long time. Novel coronavirus pneumonia is a misleading disease. Three, incidence rate and mortality rate of diseases in normal years are reported to be new crown pneumonia virus diseases. Fourth, ordinary people are credulous, such as washing their hands with tap water several times a day in winter. Moreover, the virus is afraid of high temperature, and the temperature of the home is high.

This way also leads to an increased incidence rate.

Tracing to the source, first, climate and environmental change, second, hanging water infusion enters the body, not into the stomach for treatment. 3. Excessive media publicity,

IV. nucleic acid test and vaccine without therapeutic effect are not aerosol inhalation epidemic prevention drugs. They are all problems in four aspects of traceability.

For reference only.

From the above data, we can no longer be lucky that one day the epidemic will reach the inflection point. The festival is the wave to the inflection point, and then the peak incidence rate of winter or summer after three months, or even being manipulated or publicizing the infectious capacity of the epidemic, the epidemic will never end.

Time is money, the lives of the patients, and the honor of China's fight against the epidemic. Because China has had more than two years of epidemic experience, the incidence rate reported by the Health Commission every day has not doubled every day. It is proved to be a seasonal plague, and there is no need to prevent infectious diseases. In line with the will of heaven, the state immediately announced that from now on, the national prevention and control of the new coronavirus infectious disease will be finished, all walks of life will return to their work and life before the epidemic, everyone will do a good job of preventing illness, epidemic prevention stations and hospitals will do a good job of epidemic prevention and treatment, and the media will only be allowed to report the new climate of all walks of life. The working people threw off their arms to be busy with hard money, and the spirit of wealth was good. A positive pressure on 100 evils and the epidemic ended successfully.

The national declaration of the end of the epidemic is highly authoritative. No one at the grassroots level can take responsibility. Normalization increases people's mental pressure and is easy to be manipulated. Or how much the nation votes to end the epidemic.

Just as Premier Wen Jiabao has done, the country should immediately take organizational measures to lift the road closures and other SARS virus, only allow the media to report, all units to resume work great good news on the Internet. If they do not report the consequences of the epidemic, they will be subject to legal sanctions.

Of course, ending the epidemic today is not a simple thing, which requires the country to conduct the same case procedures. First, organize a medical expert group, and then check from 2020 to 2021 now, among the patients who have just been admitted to the hospital for treatment, how many patients are patients

with real new pneumonia virus infectious diseases? We know the problem of the epidemic, if we get such as

On January 12, Henan police issued this alert: After investigation by the public security organs, Zhang Moudong, the regional head of Zhengzhou Jinyu Clinical Laboratory Center Co., Ltd. violated the provisions of the Law on the prevention and Treatment of infectious diseases, and carried out behaviors that caused the spread of novel coronavirus pneumonia or had a serious risk of transmission. Yuzhou Public Security Bureau on January 10, 2022, investigated Zhang Mou Dong on suspicion of criminal crimes and took compulsory measures. At present, the case is being further handled.

Let the people of the whole country know that if the country only spends billions of yuan on nucleic acid testing and vaccination, and the actual incidence rate is increasing, the incidence rate can be drastically reduced immediately, and the mortality rate can also be greatly reduced.

In order to avoid fewer outbreaks in the future, the state issued some documents to local governments and health commissions, such as every winter and summer, the natural law, there will be more than a few cases per 100,000 people. If there is a sudden increase in morbidity and mortality, it is a scientific question as to what type of disease it belongs to. Experts of local health committees will first deal with and determine what type of disease it belongs to. If there are more than 100,000 people in a large city with a dense population in Shanghai, and the average number of people in ten days exceeds seven, the average number of people in ten days exceeds six in a medium-sized city, and the average number of people in ten days exceeds five in a small city, or even doubles, the case shall be reported to the relevant departments of the local government of each city once, and the Health Commission shall write a written report on the epidemic situation, indicating that the nature of the epidemic may be a zoonotic disease. Development dynamics and health commission control capacity and treatment capacity to local governments. When the relevant government departments got this information, they began to pay attention to the development of the incident and make the worst plan, and then reported it to the relevant national departments in the first place, asking them to study whether it is necessary to take measures such as lockdown for guidance.

If it has risen sharply within a few days, the incidence has even doubled. These include hospital mortality rates of more than one in six patients admitted, and the discovery of a large number of animals with skyrocketing morbidity and mortality. At this time, it has been proved to be a disease, and the government

must organize its forces and rescue materials. Specific causes of morbidity and mortality were also identified. So is someone manipulating the incidence or is it an infectious problem? On the other hand, take those decisive measures, such as first sealing all the patients in the most affected areas. And get the approval of the superior, can then execute the closure or closure of a certain community or a certain airport. Local governments do not have the direct power to shut down cities.

By doing so, local governments can more scientifically grasp the real situation of the epidemic and make correct organizational measures. And it does not disturb the working and living environment of most people. If the epidemic is artificially manipulated, we will not relent. Can also avoid good self-sealing city block community, resulting in unnecessary economic losses.

If the government does not intervene immediately, or does not get approval from higher authorities, it will shut down the city itself, and the relevant government departments and major leaders will be held accountable.

If the National Health Commission does not give guidance to local government departments in time, whether the epidemic is an infectious disease or a seasonal epidemic, and even point out that the epidemic is designated by the designated traditional Chinese medicine hospital for treatment. It is the treatment of infectious diseases in designated western medicine hospitals, and whether it is necessary to close the city, etc., if you do not reply to the local government in time. Are held accountable at every level.

If the incidence rate of the epidemic reaches three times in a short time, if it does not intervene immediately, or if it is not approved by the higher authorities, the relevant government departments and leaders of the government must be responsible for the good self sealing of the city.

If the National Health Commission does not give timely guidance to local government departments on the epidemic situation, whether it is an infectious disease or a seasonal epidemic, it should even point out that the epidemic should be designated to a designated traditional Chinese medicine hospital for treatment. It is the opinion that the designated hospital of Western medicine is designated for treatment of infectious diseases and whether the city needs to be closed, which is not replied to the local government in time. Will be held accountable step by step.

Only by exerting the advantages of centralized management can the work be carried out orderly and smoothly and achieve excellent results.

If there is no incidence of SARS-CoV-2 infection in the whole world or the whole country or even a

certain region for four consecutive days, and most of the patients with SARS-CoV-2 infection have been discharged from the hospital. The country has issued a document asking hospitals to stop using the term "positive or suspected patients" and return to the old medical term "fever", such as cold or viral cold. Because a person is sick, as long as the body is too hot after taking a bath in the bathroom, wearing single clothes for a long time, or blowing the air conditioner or blowing the electric fan or drinking cold drinks in the refrigerator, or eating a bowl of cold poruel, rest or sleep, about 50 minutes later sick or fever. There is no question of virus incubation period. Direct propaganda to do a good job of disease prevention and treatment.

In addition, we should pay attention to the following documents to guide the epidemic

【 National resistance to "epidemic" 】 Delta strain spreads fast and spreads strongly, self-health protection should be strengthened; Often ventilation, wear a mask, seven steps to wash hands can not be less; One meter line, no gathering, social distance to maintain; Early reporting, no concealment, insist on temperature measurement and early medical treatment; Be controlled, understand more, and actively cooperate with the control and inspection; Do not go out, accompany the family, health and affection are not wrong; Good place, my home, to protect health depends on everyone. (from xxx Epidemic Prevention and Control Headquarters)

If you follow this seven-step hand washing advice to do, normal people will be more than ten consecutive days again and again cold winter cold air into the body, with the body temperature difference will evolve into the body moisture day by day, if often at home every day blowing air conditioning to keep warm and or summer cooling time is long, electromagnetic waves will interfere with people's nervous system rest. Or the temperature difference between indoor and outdoor, about half a month or so, or even about 50 minutes after going out, especially ladies, their genes are centripetal force, the force of the sense of thought is large, it is easy to few life cold or even fever and other diseases.

It is recommended to use electric fan to cool down in summer, or use air conditioner with caution in summer. If it is not lower than 27 degrees, the air conditioner shall be within 17 degrees in winter [air conditioners are turned on in public places such as planes and trains according to seasons. Even if the temperature on the plane has to fly to the north or to a city in the south, the temperature of the air conditioner in the passenger cabin shall be adjusted when the weather is warm. There is less moisture in the passenger's body. If all passengers rest and sleep in the designated hotel at the airport and stay for another

night after getting off the plane, don't blow the air conditioner. Don't drink the refrigerator Cold drinks, no cold food, warm bed, take a nap, drink hot tea two or three times a day, wear masks and socks on your feet, and wear hats if you go out in winter. Go to the bathroom once a week in winter, spring and autumn, take a hot bath, and run in place for more than ten steps a day to enhance immunity. The effect of prevention and treatment of all diseases is good.

It is suggested that before the epidemic season, the state should compile the following information on prevention and treatment of diseases, how to keep healthy, and the relevant epidemic prevention and control measures and laws of the state into a booklet, and distribute one book to each household. Do a good job of epidemic prevention from the source.

It is recommended to use electric fans for cooling in summer, and air conditioning should be used cautiously in winter and summer, such as not higher than 18 degrees, including public places such as planes and trains, and air conditioning should be turned on according to the season. Even if the temperature on the plane is to fly to the north or to a city in the south, the air conditioning temperature in the aircraft cabin should be adjusted on the day. If all passengers have a rest and sleep in the designated hotel of the airport for another night after getting off the plane, they should not blow the air conditioner. They are not allowed to drink cold drinks from the refrigerator, do not eat cold food, have a warm nap on the bed, drink hot tea two or three times a day, wear masks when going out, wear socks on their feet, and even wear hats if they go out in winter. In winter, spring and autumn, we go to the bathroom and take a hot bath once a week. We can strengthen our immunity by running a dozen steps in place every day.

In addition, the passengers who get off the plane at the airport should first stay in the hotel designated by the airport to rest and sleep for one night. Each passenger should put more tea in boiling water to brew a cup of hot tea, and drink the hot tea three minutes later. The hot tea water has the functions of epidemic prevention, disease treatment and health care. Before going to bed, put some warmth on the bed and have a night's sleep. It is also responsible for passengers.

If you go to the nucleic acid test after getting off the plane, the temperature in the cabin is different from the local temperature outside. If the passengers are weak, they immediately start to increase the humidity. After about 40 minutes, the nucleic acid test is easy to fail. First sleep in the designated hotel at the airport, and then do nucleic acid examination. Even all passengers are in good health. We should also do a good job in prevention and control. Foreign epidemics can not enter China, and the door can be opened directly.

The attached prescription is the prescription of Professor Jiang, an old traditional Chinese medicine, to prevent this Wuhan pneumonia

9 grams of raw Astragalus, 9 grams of North ginseng, 9 grams of Anemarrhena, 12 grams of Forsythia suspensa, 9 grams of Atractylodes rhizome, 6 grams of Platycodon grandiflorum, decoct in water and drink hot for 6 days to prevent this Wuhan pneumonia. He recovered quickly and had no side effects. This prescription was written by Professor Jiang of Beijing University of traditional Chinese medicine this time. Traditional Chinese medicine has ancestral training: in case of plague, the prescriptions for prevention and treatment are made public unconditionally. You can't make money without conscience to spread this prescription. Love!

Attachment 2: according to the characteristics of delta virus, which spreads quickly, develops rapidly, and occurs in dry and hot areas, but it is still the first to attack the lung, cough early, fever block, and easy glass shadow, I think: fast is the wind, dry is the heat, and the initial prescription is to clear the plague and eliminate the lung:

Schizonepeta tenuifolia 20g, Baibu 30g, aster 30g, Baiqian 18G, tangerine peel 12g, Platycodon grandiflorum 12g, Shuanghua 30g, Zhejiang Fritillaria 18G, Scutellaria 12g, raw gypsum 50g, stiff silkworm 18G, licorice 18G, snake grass 30g, Grass River cart 18G, Yuanshen 30g, children's discretion! Later, Zhang Yu sent a message from the old traditional Chinese medicine: follow the fate of the crowd, don't publicize, help the world and save the people, but don't want to make trouble!

Third novel coronavirus Pneumonia Control (Gansu Yuzhong Zhang Yu)

Schizonepeta tenuifolia 20g Baibu 30g aster 30g Baiqian 18G tangerine peel 12g Platycodon grandiflorum 12g ginger Pinellia 15g Shuanghua 30g Fritillaria thunbergii 18G Banlangen 20g licorice 15g snake grass 30g caohejia 18G Scutellaria 12g raw gypsum 50g Su stem 20g Convolvulus 20g (fried) ginseng 50g no high fever to remove gypsum, cough not too much to remove Su stem and Convolvulus, pharyngeal pain to remove yuan Shen.

This prescription is for adults, half for children over the age of eight and one-third for children under the age of five. It is appropriate to have loose stools after taking it. One for one day antipyretic, three for three days cough, ten for ten days CT test is normal, as the evaluation standard. The main symptoms of the new type of coronary pneumonia are dry cough, fever, fatigue and sore throat. With a sense of responsibility of traditional Chinese medicine, we serve the country, save the people, treat the disease and save people. We have no plans of fame and wealth, and do not accept any adverse criticism.

Unilateral local laws cannot be despised. We should cooperate with scientific experiments and laboratory theories to carry them forward, which is very effective for the benefit of medical treatment, and it is also a convenient platform for dealing with regional plague,

Then supplement the relevant national epidemic situation documents. After everyone sees the documents in his spare time, he will directly do a good job in the early stage of personal disease prevention and treatment.

Government departments should dare to declare COVID-19 disease boldly, and in China, the victory is over.

First, the government's various news media should vigorously publicize the new atmosphere in all walks of life and encourage good people and good deeds. No media is allowed to publicize all kinds of information about the epidemic. Those who violate the rule of law will be punished immediately.

Second, all walks of life across the country are required to do a good job immediately and fully restore to the previous working environment and living and learning environment. Only when all students return to school can the teaching quality be improved, which will drive the market economy of all walks of life to become active and invest in the great cause of the four modernizations!

Three、 The majority of medical personnel, epidemic prevention stations and relevant staff of local governments at all levels are required to do a good job in disease prevention and treatment.

four. In case of an infectious epidemic in a certain place in the future, if it is necessary to close cities and roads, there must be multiple deaths of people and livestock in the local area continuously, and the local experts must technically determine that it is an infectious disease, and write written materials and report them to the government at or above the provincial level. The government will then send an expert group of the competent department to the local area for further verification, The government first approved to close the outbreak area, block the circulation with the outside world and focus on the treatment of infectious diseases. Anyone and any local department have no right to close cities and roads without the approval of the government at or above the provincial level.

five. Do not believe rumors, spread rumors, or do anything that violates the law and discipline.

Sixth, we should do a good job in making donations during the acid period.

Seventh, we should vigorously publicize positive energy, require the majority of young people to learn from good people and good deeds, love their country and labor, and devote themselves to the great cause of

four modernizations.

eight. No unit or individual is allowed to take advantage of the epidemic situation to exaggerate the harm of publicity, or sell their products or commodities at high prices. Once found, they will be severely punished.

For EXAMPLE, WHEN there was a strong earthquake in the city of Beijing in the Qing Dynasty, the GuangXU Emperor killed animals or released them for many days, and some emperors opened the national Treasury to put food to relieve the victims. Some emperors specially sought a group of prisoners. It's all about easing social conflicts. The formation of anger, resentment, resentment to the sky less, morbidity is reduced. If winter and summer are the peak periods of incidence, some people will not be able to take advantage of the epidemic. Otherwise, the outbreak will not end. It is not conducive to the development of productive forces and affects social stability and unity.

In this way, the peak incidence rate will not be reached every winter and summer. Some people will not be able to take advantage of the epidemic. Otherwise, the epidemic will never end, which is not conducive to the development of productive forces and affects social stability and unity.

Since January 14, 2020, I have issued thousands of comments on the headlines and the bulletin. For example, this disease is not an infectious disease, traditional Chinese medicine can cure it, western medicine can cure this disease as long as it doesn't hang water, and so on.

For example, when SARS broke out in Guangzhou in 2003, I saw that Yang 30 inch newspaper reported that the vice mayor of Beijing failed to catch the SARS epidemic and was removed from his post, and Yangzhou was also closed. After reading the newspaper in the morning, I immediately wrote a letter of recommendation and sent it to Premier Wen by registered letter

Request to immediately lift the improper practices against SARS so as not to be used by people around the world. The content is about two pieces of paper, and personal life is used as a guarantee for the correctness of my proposal. [Zhongnanhai mailbox]] three days after receiving the letter, the country immediately lifted the road closure and other practices, and the SARS disease has disappeared since then. If the registered letter is even one day late, the plane on Beijing airport will even be grounded.

My understanding of the origin and prevention of the novel pneumonia virus disease, after the article was published in the world's leading journal, I can predict that as long as countries do a good job, also pay attention to the amount of water and infusion and methods, and the media is not an infectious disease

epidemic, there is no need to report other morbidity and mortality information, it is the responsibility of epidemic prevention departments and hospitals. The worldwide outbreak was over in two months, also by the end of March. Otherwise, there will be long-term hospitalized patients every winter and summer, improper water infusion volume and methods, and the evolution of new viruses and other problems. Patients can take the article to negotiate whether there is a big problem of medical theory wrong. In this way, we can reduce the incidence of disease in the future, especially the mortality of patients, and reduce the number of people around the world every year by hundreds of thousands. Moreover, in the future, the patient's body is not easy to be affected by the eccentric hole field in the cell, which will lead to the replication of more viruses and the evolution of diseases such as tuberculosis. People all over the world live long and happy lives.

This article is for experts' reference only. I can't write. I only do my scientific duty and sense to serve the country and save the people. There is no motivation to hurt one party, no plan of fame and wealth, and I don't accept any bad criticism.

**科学家：**

任何神仙控制不住每一到冬季天气冷，就发病率  
和死亡率都增多。

因为人，不像动物那样长出更多的绒毛，将身  
体进行自动调温暖。而且这些长毛和绒毛非常  
轻，仅几两重。当动物奔跑运动去寻食，或遇  
到强敌作殊死战斗，这些身体上绒毛不会影响  
激烈的战斗，就是转化出热能立即被散掉。

尽管它们生活环境恶劣，但它们有这个天然空  
调器，就得到保护，动物少生病和死亡的动物  
少。

而人类首先冬季每一个人穿衣服和鞋子，都比  
夏季重至少一斤，每一天站或坐十小时，就身  
体内推挤摩擦转化出水分子多，就是湿气增加，  
十万人中有几个人容易生感冒发烧的病。不  
奇怪。大家要多保重身体，不要有过多精神压  
力，不要太劳累和受凉，不喝冷饮不吃冷食，冬  
夏都要少用慎用空调，就可减少电磁波干扰神  
经系统休息。还要冬季一定要穿羽绒服之类保  
暖的轻衣服，少穿皮衣鞋；秋冬春季每约五天  
去浴室洗澡一次，洗澡后身上还热呼呼的不能  
吹空调不能穿单衣时时间长，睡觉时床面上要  
放暖和些，有条件中午左或右侧俯睡床上休息  
或睡觉，就是将身体向前倾点睡，就将身体内  
运动结构，能量结构得到了调整，增强了各器  
官的免疫力，这要做到以上，就不容易生病，  
这次季节性感冒病的疫情大灾难，就立即结束！

西医挂水没有中医煎药水喝的好。  
而且这次更需要中医标本共治。如古代一次次瘟疫都是中医大显身手治病。时间就是生命，必须要立即落实具体的事，才事半功倍夺取全面胜利。因我民科，说话没官科作用大。所以请习主席定夺！
